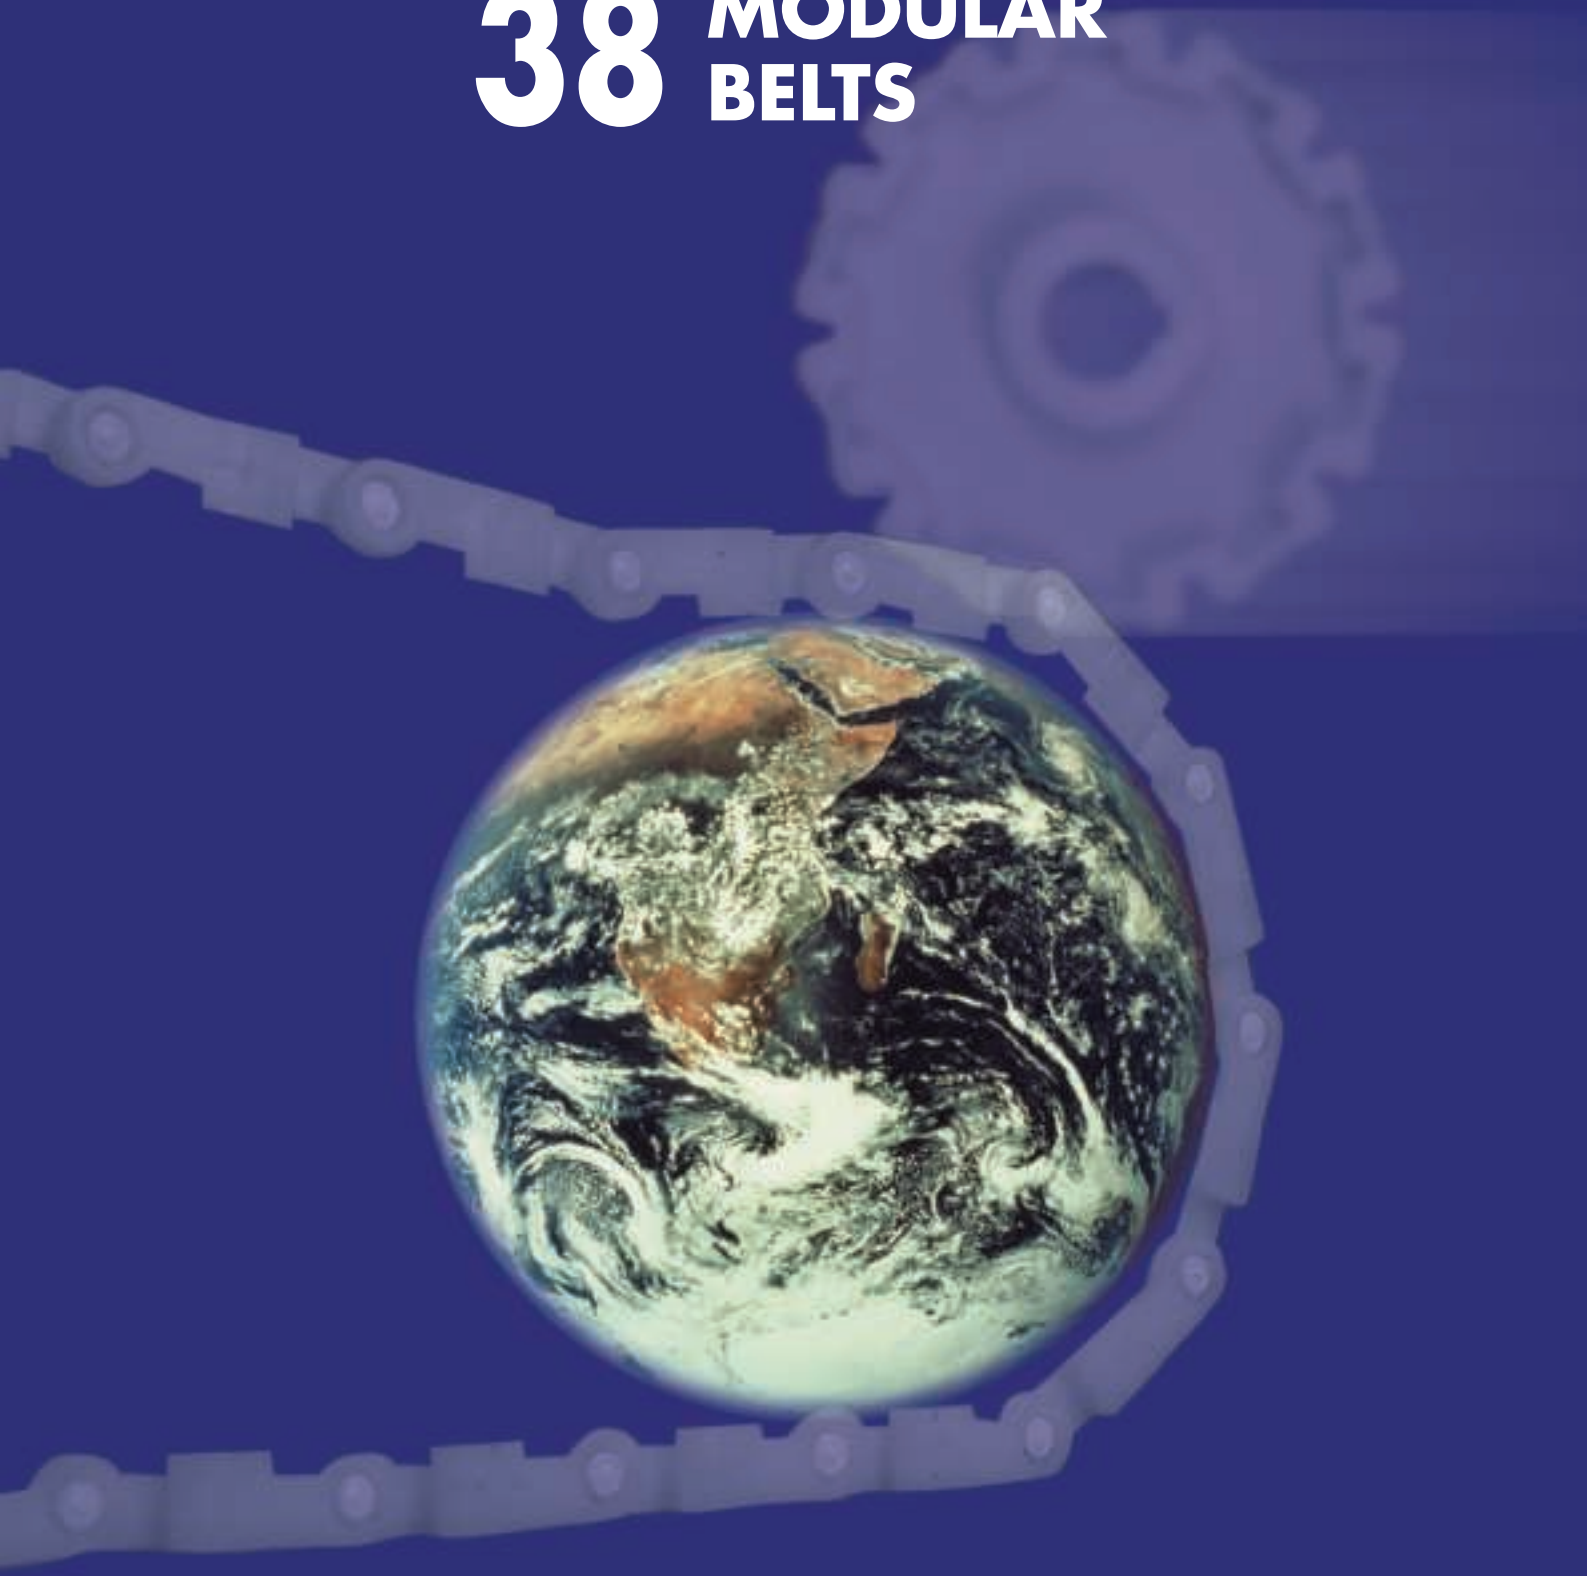
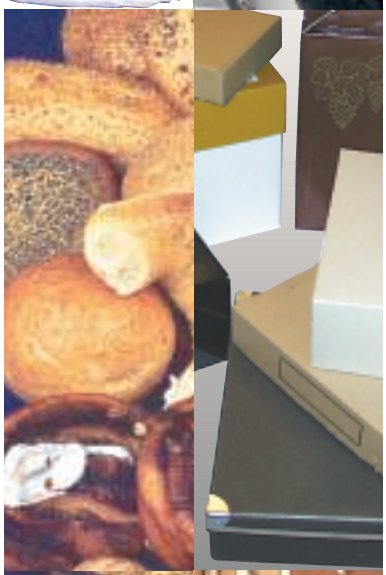
38 MODULAR BELTS



SCANBELT

...makes the world go around...



ScanBelt has the largest and most flexible programme on the market. This enables us to offer the ultimate solution. Currently, we have 38 different belt types in our product range. All of these can be supplied in various materials and colours.

A major factor which makes ScanBelt so flexible is that all our design, tool making, plastic moulding and assembling of whole belts are all carried out in the same factory in Hjoerring, Denmark.

In this brochure you will find the different belt types and the general technical specification data including a description of the plastic materials used.

For further technical information, please contact us for a copy of our comprehensive technical manual and/or a sample.

Additionally, you may choose to visit our web site: **www.scanbelt.com** where all this information is also available.

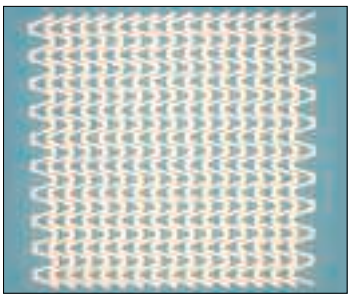
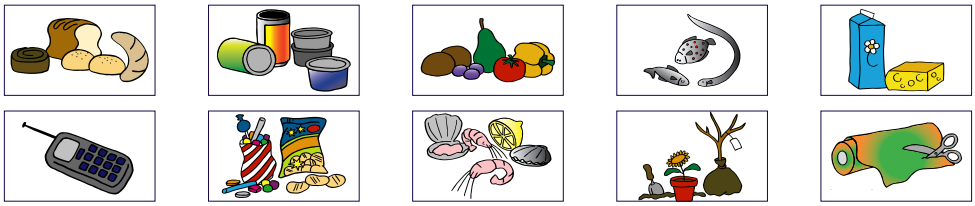
Car assembly factory

Still going strong...
In operation since 1988!

BELT DESCRIPTIONS

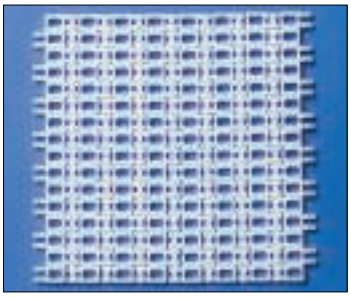
Transport S.12

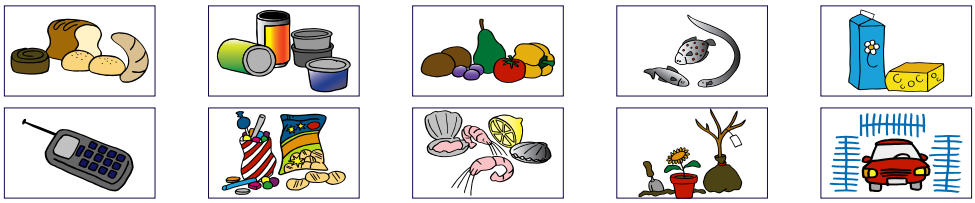




The S.12 "Minipitch" is now available. The module size for this Minipitch belt is 12,5 mm. To begin with, we have concentrated on a very open version of the Minipitch belt. This has already proven very applicable in the bakery industry. Currently, there is only 1 belt available in this range. This is an open belt with a slightly curved surface.

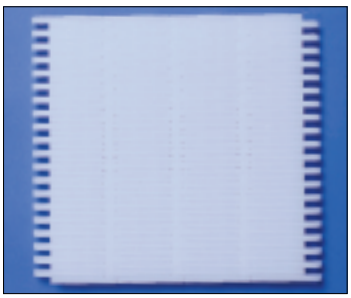
Transport S.25

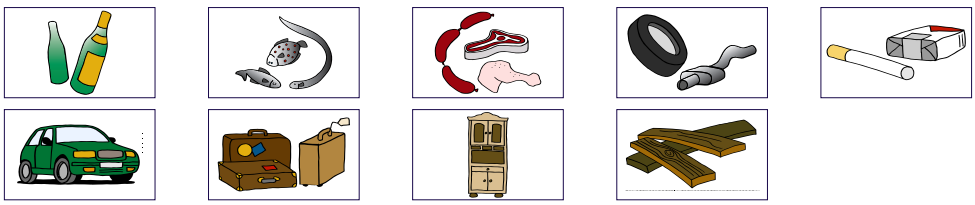




The S.25 range of belt series is suitable for transportation of light products. The module size is 25 mm and the belts are available in widths from 50 mm to 4000 mm.
Currently, there are 18 types of belts in this range including various open and closed module designs and two-component and structure surfaces. Accessories, such as varying height side guards and straight and bent flights including round top flights are available in this range.

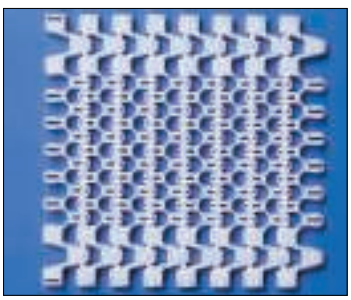
Transport S.50

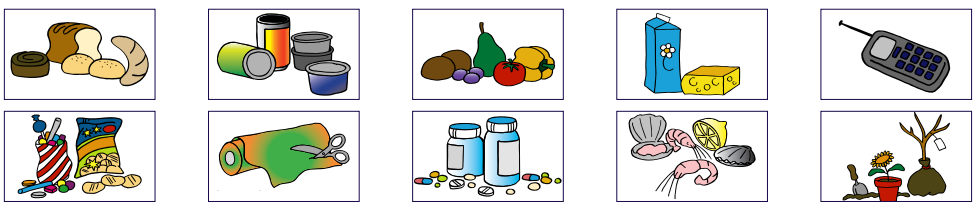




The S.50 range of belt series is suitable for transportation of light products. The module size is 50 mm and the belts are available in widths from 50 mm to 4000 mm.
Currently, there are 16 types of belts in this range including various open and closed module designs and two-component and structure surfaces. Accessories, such as varying height side guards and bent and straight flights including round top are available in this range.

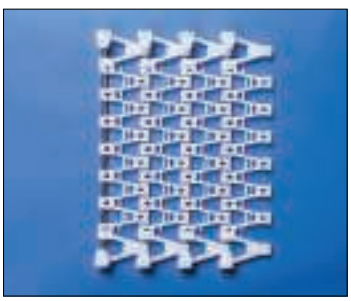
Transport S.100

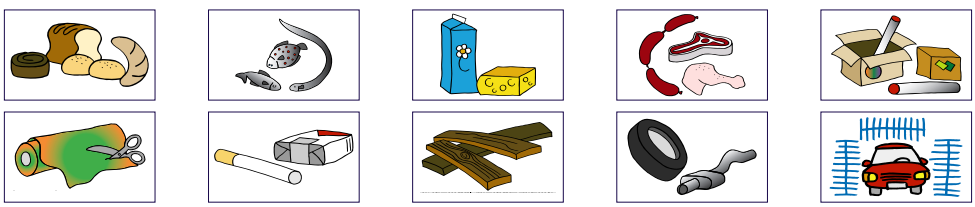




ScanBelt has solved the problem of transporting light products on radius conveyors with the inner radius from 1:1.5 x belt width, by introducing this new modular constructed radius belt.
The module size for this series is 25 mm. The belt's design ensures that the products being carried remain stable through the curves. The belt runs in both S and J radius conveyors.

Transport S.250

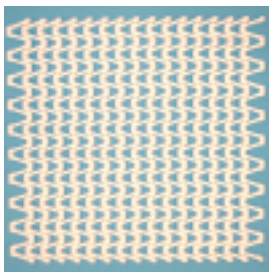




The S.250, which has a module size of 50 mm, is a modular constructed belt. The belt is ideal for transporting heavy products. It is the ideal solution in cooling/freezing spirals, since the weight per m_ is very low.
The belts in this series run in both S and J curves. The belt's design ensures that the products being carried remain stable through the curves. The belt pull is significantly increased when fitted with steel reinforcements, but can then only turn in one direction.

BELTS S.25

S.12-400



Belt pull PE 310 PP 420 POM 700
Open Area 40%
Approval FDA
Width interval 10 mm

EASY TO CLEAN

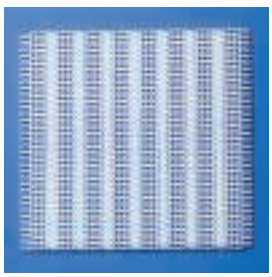
Applications: The belt is an open belt with a slightly curved surface. This makes it very applicable as a cooling belt. It can run on very small nose bars down to 14 mm. It has already proven itself as the ideal solution for the bakery industry.

ACCESSORIES

Sprockets for S.12-400 are available with 10-19-24 and 28 teeth, with both round and square bore.

BELTS S.25

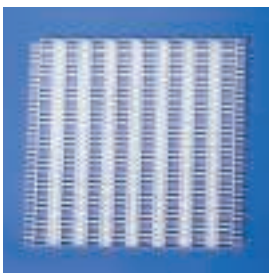
S.25-100-600-700



Belt pull PE 540 PP 740 POM 1250
Open Area 100= 3x3mm/20% 600= 1,5x3mm/16% 700= 3x12mm/27%
Approval FDA
Width interval 6 mm

Applications: The belt has a smooth surface, which makes it the ideal choice for sweets, dairy, snacks and seafood industry.

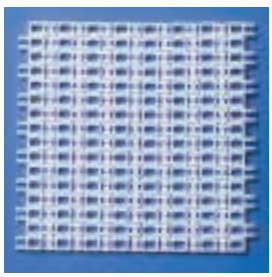
S.25-200



Belt pull PE 540 PP 740 POM 1250
Open Area 3 x 12 mm/ 27%
Approval FDA
Width interval 12 mm

Applications: The belt has raised ribs for the use of finger transfer plates, which makes it the ideal choice for bottling, canning and other industries.

S.25-400

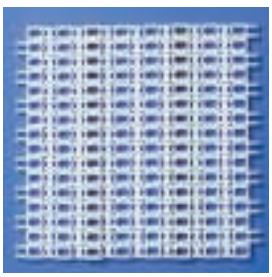


Belt pull PE 630 PP 1060 POM 1500
Open Area 6 x10 mm / 29%
Approval USDA
Width interval 12,5 mm

EASY TO CLEAN

Applications: The belt is open with a smooth surface, which makes it the ideal choice for seafood, red meat, vegetables, spring rolls, and bakery. It can even be used as a cooling/freezing belt.

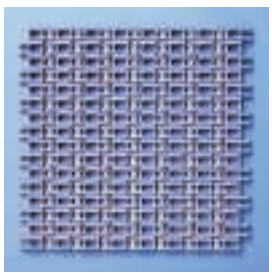
S.25-400F/Two component



Belt pull PE 630 PP 1060
Open Area 6 x 10 mm / 29%
Approval USDA
Width interval 12,5 mm

Applications: The belt has a friction surface, which makes it the ideal choice for transportation of packed goods on a slightly inclined conveyor.

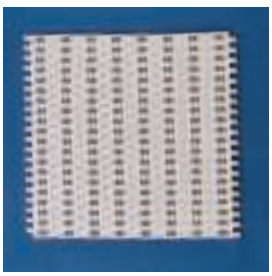
S.25-402



Belt pull PE 630 PP 1060 POM 1500
Open Area 6 x 10 mm / 29%
Approval USDA
Width interval 12,5 mm

Applications: The belt has raised ribs, which makes it the ideal choice for transportation of products which demand a low contact surface.

S.25-406



Belt pull PE 630 PP 1060 POM 1500
Open Area 1 x 6 mm / 13%
Approval FDA
Width interval 10 mm

Applications: The belt has a smooth surface, which makes it ideal for drainage of small products, such as noodles.

BELTS S.25

S.25-408

Belt pull PE 800 PP 1200 POM 2000
Open area Closed
Approval FDA
Width interval 5 mm

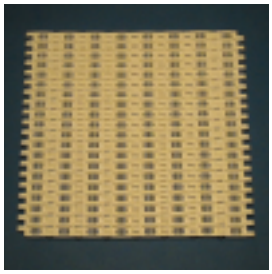
Applications: The belt has a flat top, which makes it the ideal choice for transportation of small products, machine components and as a cooling belt for the rubber industry.

S.25-411

Belt Pull PE 630 PP 1060 POM 1500
Open area 3 x 6 mm / 26%
Approval USDA
Width interval 12,5 mm

Applications: The belt is open and net-like with a curved surface, which makes it the ideal choice for fish, meat and vegetables. It is also suitable for blanching belts and boiling noodles.

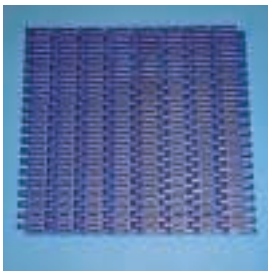
S.25-412



Belt pull PE 630 PP 1060 POM 1500
Open area 1 x 6 mm / 13%
Approval FDA
Width interval 10 mm

Applications: The belt is open and net-like with 2,5 mm flights. It is the ideal choice for medium-heavy duty transportation of fish, meat, vegetables etc. It is also suitable as a blanching belt and boiling of noodles.

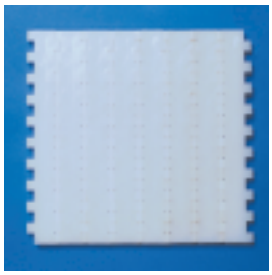
S.25-420



Belt pull PE 800 PP 1200 POM 2000
Open area 2 x 10 mm / 14%
Approval FDA
Width interval 10 mm

Applications: The belt has raised ribs for the use of finger transfer plates. This makes it the ideal choice for medium-heavy duty transportations, i.e. for the pharmaceudical industry of small products, such as bottles, glass and machine components

S.25-800



Belt pull PE 550 PP 650 POM 1050
Open area Closed
Approval USDA
Width interval 10 mm

EASY TO CLEAN

Applications: The belt has a flat top, which makes it the ideal choice for small products, meat balls, snacks, berries, fruit, red meat and as trimming lines. The smooth back makes the belt highly cleanable.

S.25-806

Belt pull PE 550 PP 650 POM 1050
Open area 4,5x1,5 mm/10%
Approval USDA
Width interval 10 mm

EASY TO CLEAN

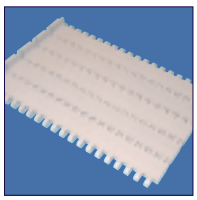
Applications: The belt has a smooth, perforated surface, which is ideal for products requiring light drainage. The smooth back makes the belt highly cleanable.

For technical details please visit: **www.scanbelt.com**

ACCESSORIES

Sprockets for S.25-4XX are available with 6-8-12 and 20 teeth, both with round and square bore.

Flights for S.25-4XX are available in size 3-25 and 50 and bent or with a round top.



Moulded side guards for S.25-408-412 for transportation of very small products.

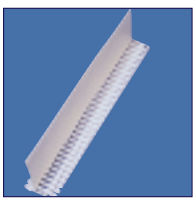
Sprockets for S.25-800 are available with 6-12 and 20 teeth, both with round and square bore.

Flights for S.25-406-408 are available in size 3-25 and 50 mm and bent or with a round top.

All types of accessories are available in at least 3 types of materials with different strengths.

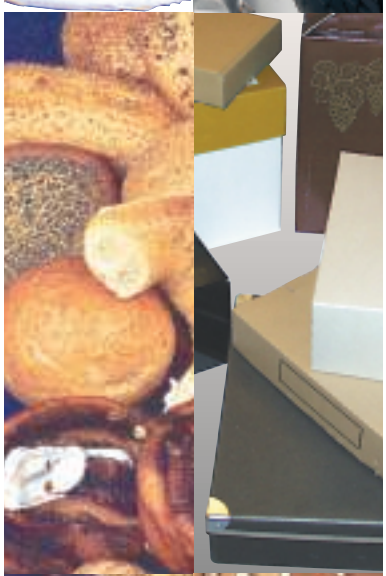
Sprockets for drum motors are available for S.25-4XX in all sizes.

For the S.25, the standard heights of side guards are 25 and 50 mm. These side guards are available for all belts within the S.25 series.



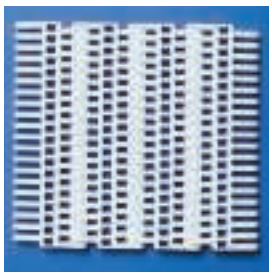
Flights for S.25-100-600-700 are available in size 5-25 and 50 mm and bent or with a round top.

High friction modules for S.25-400F with 3 mm "soft flights" for extra grip



BELTS S.50

S.50-100



Belt pull	PE 1840 PP 2795 POM 4200
Open area	5 x 9mm / 27%
Approval	FDA
Width interval	10 mm

Applications: The belt is open with a smooth surface, which makes it the ideal choice for heavy-duty transportation, fishing industry, glass industry and transportation of raw materials (for further processing.)

S.50-200

Belt pull	PE 1840 PP 2795 POM 4200
Open area	5 x 9 mm/ 27%
Approval	FDA
Width interval	20 mm

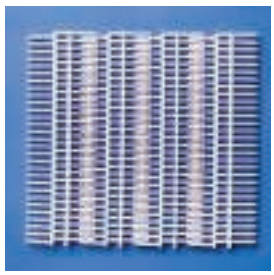
Applications: The belt has raised ribs for the use of finger transfer plates, which makes it the ideal choice for boxing, bottling, canning, machine components as well as pasteurisation and accumulation in the brewery and canned goods industry.

S.50-300

Belt pull	PE 1740 PP 2300 POM 3450
Open area	5 x 9 mm / 27%
Approval	FDA
Width interval	10 mm

Applications: The belt is open and net-like with 4 mm high ribs across, which makes it the ideal choice for tasks that require the delivery of small products that cannot tolerate normal flights.

S.50-400

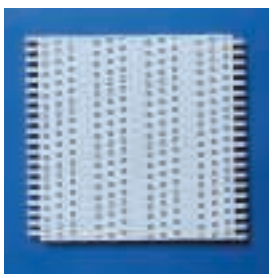


Belt pull	PE 1640 PP 2160 POM 3240
Open area	5 x 11 mm / 47%
Approval	USDA
Width interval	7 mm

EASY TO CLEAN

Applications: The belt is open with a smooth surface, which makes it the ideal choice as a cooling/freezing belt in seafood, bakery, vegetable and meat industries and other areas where large air-flow combined with a small open area is required.

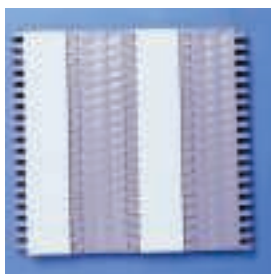
S.50-600



Belt pull	PE 1790 PP 2400 POM 3600
Open area	1 x 6 mm / 9%
Approval	USDA
Width interval	5 mm

Applications: The belt has a perforated flat top, which makes it the ideal choice for corn, pickles, snacks, meat for mincing, sweets, dairy and other industries that handle products requiring light drainage.

S.50-600F/Two component



Belt pull	PE 1790 PP 2400
Open area	Closed
Approval	USDA
Width interval	5 mm

Applications: The belt is closed with a friction surface, which makes it the ideal choice for transportation of goods on a slightly inclined conveyor.

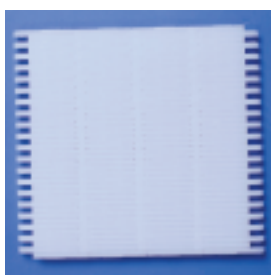
S.50-601

Belt pull	PE 1790 PP 2400 POM 3600
Open area	5 x 7 mm / 27%
Approval	USDA
Width interval	10 mm

EASY TO CLEAN

Applications: The belt is open with a smooth surface, which makes it the ideal choice for medium-heavy duty transportation, seafood and transportation of raw materials for further processing.

S.50-602



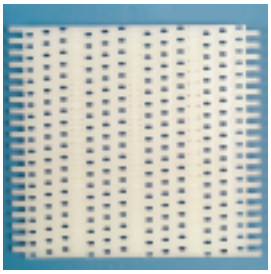
Belt pull	PE 1790 PP 2400 POM 3600
Open area	Closed
Approval	USDA
Width interval	5 mm

Applications: The belt has a flat top with 3 mm high ribs, which makes it the ideal choice for corn, pickles, snacks, meat for mincing, sweets, dairy and other industries that handle products not requiring drainage.

BELTS S.50

All types of accessories are available in at least 3 types of materials with different strengths.

S.50-606



Belt pull PE 1790 PP 2400 POM 3600
Open area 3 x 6mm / 10%
Approval USDA
Width interval 5 mm

EASY TO CLEAN

Applications: The belt has a smooth surface, which makes it ideal for drainage of small products, such as shrimps.

S.50-608

Belt pull PE 1790 PP 2400 POM 3600
Open area Closed
Approval USDA
Width interval 5 mm

Applications: The belt has a flat top which makes it the ideal choice for corn, pickles, snacks, meat for mincing, sweets, dairy and other industries that handle products not requiring drainage.

S.50-610-630

Belt pull PE 1790 PP 2400 POM 3600
Open area 1 x 6 mm / 9%
Approval USDA
Width interval 5 mm

Applications: These belts have a perforated flat top with either 1 mm and 3 mm flights, which makes them an ideal choise for corn, pickles, snacks, meat for minching, sweets, dairy and other industries that handle products requiring light drainage as well as small flight effect.

S.50-808

Belt pull PE 820 PP 1510 POM 2310
Open area Closed
Approval USDA
Width interval 20 mm

EASY TO CLEAN

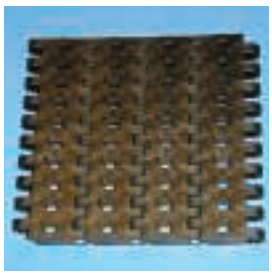
Applications: The belt has a flat top, which makes it the ideal choice for red meat, poultry, fruit, sweets and vegetable industries as well as trimming lines in the butchery and fish industry. The smooth back makes the belt highly cleanable.

S.50-908

Belt pull PP 6000
Open area Closed
Approval FDA
Width interval 20 mm

Applications: The belt is closed and has a smooth surface. This belt is the strongest plastic modular belt on the market, thus being suitable for heavy-duty transportation within car production, pallet handling and automatic truck loading systems.

S.50-930

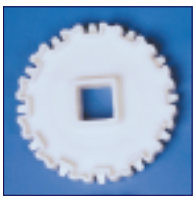


Belt pull PP 6000
Open area 7 x 11 mm / 13%
Approval FDA
Width interval 20 mm

Applications: The belt is open with 3 mm studs on the surface. The belt is ideal as "people mover" in the car industry as well as other tasks where a non-slip surface is required.

For technical details please visit: **www.scanbelt.com**

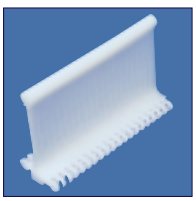
ACCESSORIES



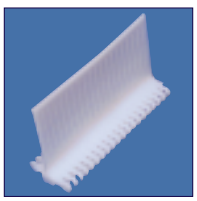
Sprockets for S.50-100-200-300-6XX are available with 6-8-10-12 and 16 teeth, both with round and square bore.

Sprockets for drum motors are available in all drum sizes.

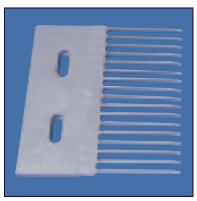
For the S.50 the standard heights of side guards are 50, 75, 100 and 150 mm.



Flights with round top are available in the same sizes as standard and bent flights.



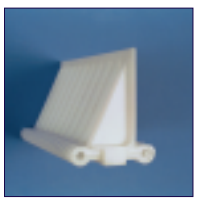
Standard flights are available in 25-100 mm.



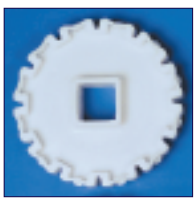
Finger transfer plates are available in one single standard in different types of material. These can be adjusted to fit the width.

Flights with ribs – NON-STICK - are available in 50 and 100 mm.

Bent flights are available in 75 and 100 mm.

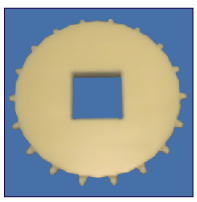


Reinforced flights are available in 75 mm, 150 mm.

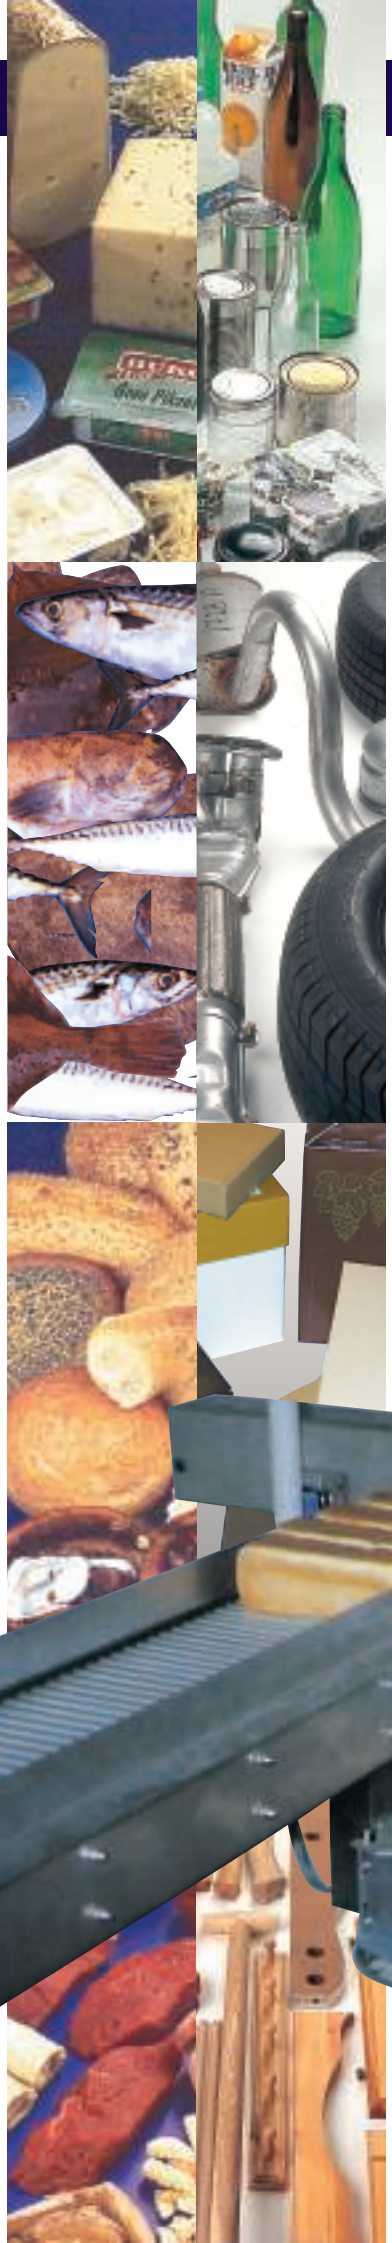


Sprockets for S.50-800 are available with 6-8-10 and 12 teeth, both with round and square bore.

Sprockets for S.50-400 are available with 6-8-10 and 12 teeth, both with round and square bore.



Sprockets for S.50.9XX are available with 12 and 18 teeth. The sprockets have 30 mm wide "shoulders" to ensure ideal support of the belt.



RADIUS BELTS

Radius Belts from ScanBelt provide the ideal solution to product directional change without the need for transfers, increasing the available options for achieving the ideal conveyor design solution.

The range of curved belts, all with an inner radius as low as 1.5 x the belt width, offer enormous flexibility, and the ScanBelt S-100 types provide a competitive alternative to the traditional straight running belts. By the use of steel reinforcements, very high belt pull can be achieved making it possible to manufacture conveyors up to 100 metres long.

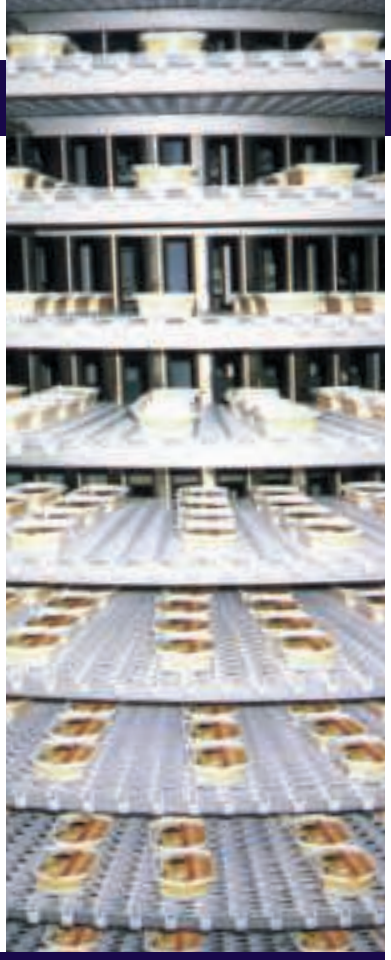
Radius belts from ScanBelt are the state-of-the-art technology for spirals used for cooling, freezing and boiling. Excellent proof is provided by belts from ScanBelt over 1000 metres in length currently in operation which have been running successfully for many years.

Friction flights, side guards and other accessories are available for both 25 mm and 50 mm belts to ensure the exact solution to all transportation tasks.

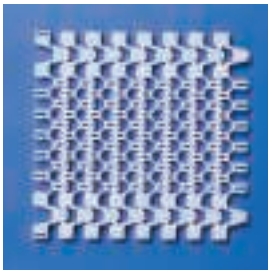
ScanBelt S-250 transportation of cheese

ScanBelt J-350 for bread elevation

RADIUS BELTS



S-100 R



Open area 12 x 8mm / 52%
Approval FDA
Width interval 20 mm

Applications: The belt, which has an radius from 1.5 x the belt width, can turn in all directions. The belt is cleanable and thus suited for packed as well as unpacked products. The belt is ideal for even heavy transportation in curves and spirals.

Belt data		
Belt material	**Rods**	**Max. Belt pull kg.**
Polyacetal (POM)	PP Nylon Steel	75 110 150

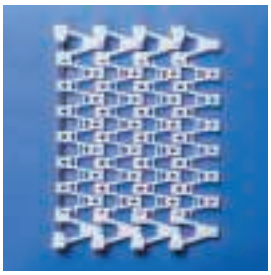
ACCESSORIES

ScanBelt S-100 can be supplied with hooks, which at the same time will work as Hold-Down.

Flights for the S-100 are available in the sizes: 25, 50 and 75 mm. The friction flights come in the same sizes.

Sprockets for the S-100 are available with 8, 12 and 20 teeth, all with both round and square bore.

S-250

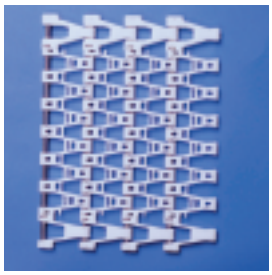


Open area 20 x 33 mm 67%
Approval FDA
Width interval 33 mm

Applications: The belt, which has an inner radius from 1.5 x belt width, is ideal for radius conveyors with a medium-heavy load. It runs with hooks, which means that the whole belt width can be used. The hooks make the belt highly cleanable. The belt runs in S-curves. If provided with a steel reinforcement, the belt pull is significantly increased, however, it limits the belt turning in only one direction. Side guards and 3 mm friction modules are available as accessories.

	Belt data		
	Max. Belt pull kg.		
Belt material	S-250	J-350	J-450
Polyacetal (POM)	250	350	450
Polypropylene (PP)	140	196	
Steel reinforcements	400	400	

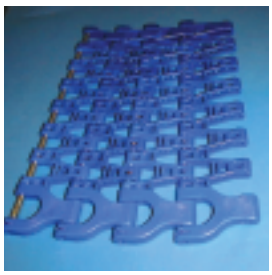
J-350



Open area 20 x 33 mm 67%
Approval FDA
Width interval 33 mm

Applications: This type of belt runs in U-profile in the radius conveyors. Ideal for heavy transportation, especially when the belt has steel reinforcements. Can only turn in one direction. Has an inner radius from 1.5 x the belt width. The belt is the ideal solution for cooling spirals, both with smooth and rippled drums. 3 mm friction modules are available as accessories.

J-450



Open area 20 x 33 mm 67%
Approval FDA
Width interval 33 mm

Applications: This type of belt has been developed for sprirals and has a heavy outer module for high belt pull and a light inner module to ensure a low colapse factor. Different types of middle modules are available, i.e. high friction modules. This belt is patented.

ACCESSORIES

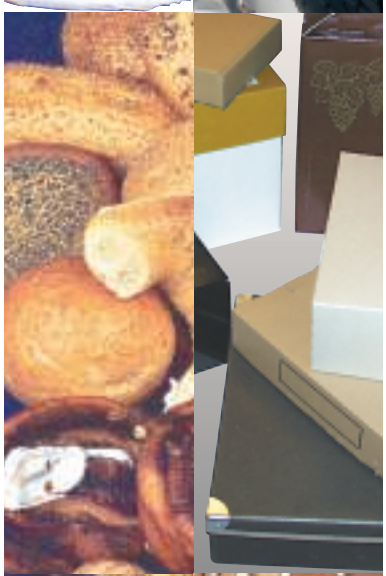
Sprockets for S-250, J-350 and J-450 with 11 teeth with both round and square bore are available. Can also be delivered in steel.

Sprockets for J-350 and J-450 with 6 teeth with both round and square bore.

25 mm side guard for the S-250.

Turning shoe for the S-250.

For technical details please visit:
www.scanbelt.com



MATERIAL DESCRIPTION

POLYETHYLENE

Thermal plastic with a weight mass of approx. 0.92 grams/cm^3.
Suitable for use in cold areas.
Temperature range from ÷ 73°C to + 66°C.
High chemical resistance.
FDA approved.
Tough yet flexible material with high impact strength.

POLYETHYLENE PLUS

Thermal plastic with a weight mass of approx. 0.93 grams/cm^3.
Suitable for use in medium temperature areas.
Temperature range from ÷ 20°C to + 80°C.
FDA approved.
Same characteristics as Polyethylene, with approx. 30% larger tensile strength as well as reduced impact strength.

POLYPROPYLENE

Thermal plastic with a weight mass of approx. 0.92 grams/cm^3.
Suitable for use in high temperature areas.
Temperature range from + 5°C to + 100°C.
High chemical resistance.
FDA approved.
A strong material with a medium tensile strength and low impact strength at low temperatures.

POLYPROPYLENE with 10% TALCUM

Thermal plastic with a weight mass of approx. 0.98 grams/cm^3.
Suitable for use in high temperature areas.
Temperature range from + 40°C to + 130°C.
High chemical resistance.
FDA approved.
Medium tensile strength, low impact strength at low temperatures.

POLYPROPYLENE with 30% GLASS

Thermal plastic with a weight mass of approx. 1.14 grams/cm^3.
Suitable for use in high temperature areas.
Temperature range from + 50°C to + 150°C.
High chemical resistance.
A strong and consistently stable material. Extremely high tensile strength, but gives a larger friction between the support and the belt. Low impact strength at low temperatures.

POLYPROPYLENE ANTISTATIC

Thermal plastic with a weight mass of approx. 0.98 grams/cm^3.
Suitable for use in areas requiring electrical diversion.
Temperature range from + 5°C to + 100°C.
High chemical resistance.
Tensile strength as normal polypropylene.

POLYACETAL (POM)

Thermal plastic with a weight mass of approx. 1.4 grams/cm^3.
Suitable for use in both warm and cold areas.
Temperature range from ÷ 43°C to + 95°C.
Has a limited resistance to certain chemicals. If in doubt please contact ScanBelt.
FDA approved.
Consistently stable material with high tensile strength
Low friction between belt and support.
Low impact resistance at low temperatures.

POLYACETAL ANTISTATIC

Thermal plastic with a weight mass of approx. 1.4 grams/cm^3.
Suitable for use in areas requiring electrical diversion.
Temperature range from ÷ 43°C to + 95°C.
Other characteristics are the same as polyacetal.

NYLON 6

Thermal plastic with a weight mass of approx. 1.1 grams/cm^3.
Suitable for use in both warm and cold areas.
Temperature range from ÷ 45°C to + 110°C.
High chemical resistance. Not suitable in damp areas at high temperatures.
FDA approved.
Tough yet flexible material with high tensile strength as well as high impact strength.

NYLON 6.6

Thermal plastic with a weight mass of approx. 1.1 grams/cm^3.
Suitable for use in both warm and cold areas.
Temperature range from ÷ 45°C to + 150°C.
High chemical resistance, though not suitable for use in very damp areas at high temperatures.
Tough yet flexible material with high tensile strength as well as high impact strength.

NYLON ANTISTATIC

Thermal plastic with a weight mass of 1.1 grams/cm^3.
Suitable for use where electrical diversion is required.
Temperature range from ÷ 45°C to + 110°C.
High chemical resistance. Not suitable in wet areas.
Tough yet flexible material with high tensile strength as well as high impact strength.

FIRE RETARDING POLYPROPYLENE

Thermal plastic with a weight mass of approx. 0.98 grams/cm^3.
Suitable for use in fire hazard areas, as microwave ovens and the like.
Temperature range from + 5°C to + 120°C.
High chemical resistance.
Flammability VO (3.2 mm)
FDA approved.
Strong material with medium tensile strength. Low impact strength at low temperatures.

FRIKTION MATERIAL

Thermal plastic with a weight mass of approx. 1.14 grams/cm^3.
Suitable for use in both warm and cold areas.
Temperature range from ÷ 25°C to + 80°C.
High chemical resistance.
FDA approved.
Soft material with high friction, low tensile strength.
Suitable to put on the surface of PE and PP belts.
Used for belts with slight inclination.

SILICONE AND TEFLON MATERIAL

An additive added to polyethylene and polypropylene. This material prevents products from freezing or sticking to the belt.
FDA approved.
The characteristics of the basic material are not changed essentially.
